The following Nationwide Permit (NWP) regional conditions are for the State of Oregon. Regional conditions are placed on NWPs to ensure projects result in no more than minimal adverse impacts to the aquatic environment and to address local resource concerns.

ALL NWPs –

1. **Notification:** For permittees that received written NWP approval, upon starting the authorized activities, you shall notify the U.S. Army Corps of Engineers, Portland District, Regulatory Branch that the work has started. Notification shall be provided by e-mail to PortlandRegulatory@usace.army.mil and the email subject line shall include: Corps project number and the project location by county.

2. **Aquatic Resources of Special Concern:** Pre-construction notification to the District Engineer in accordance with NWP General Condition 32 is required for all activities conducted in waters of the U.S. within an aquatic resource of special concern. Written approval from the District Engineer must be obtained prior to commencing work.

Aquatic resources of special concern in Oregon include native eel grass (Zostera marina) beds, mature forested wetlands, bogs, fens, vernal pools, alkali wetlands, wetlands in dunal systems along the Oregon coast, Willamette Valley wet prairie wetlands, marine gardens, marine reserves, kelp beds, and rocky substrate in tidal waters.

Note: If the District Engineer determines that the adverse effects of the proposed activity is more than minimal, then the applicant will be notified that either:

(a) the activity does not qualify for authorization under the NWP and instructed to seek authorization under an individual permit; 
(b) the activity is authorized under the NWP subject to submission of a mitigation plan that would reduce the adverse effects on the aquatic environment to the minimal level; or 
(c) the activity is authorized under the NWP with specific modifications or conditions.

3. **Cultural Resources and Human Burials-Inadvertent Discovery Plan:** In addition to the requirements in NWP General Conditions 20 and 21, permittee shall immediately notify the District Engineer if, at any time during the course of the work authorized, human burials, cultural items, or historic properties, as identified by the National Historic Preservation Act and Native American Graves Protection and Repatriation Act, are discovered. The permittee shall implement the following procedures:

   a. Immediately cease all ground disturbing activities.

   b. Notify the Portland District Engineer as soon as possible following discovery but in no case later than 24 hours. Notification may be sent by fax (503-808-4375) or electronically
(PortlandRegulatory@usace.army.mil) and shall identify the Corps project number and clearly specify the purpose is to report a cultural resource discovery. Follow-up the notification by contacting the Corps representative (by email and telephone) identified in the verification letter.

c. Notify the Oregon State Historic Preservation Office by telephone at (503) 986-0674.

Failure to stop work immediately and until such time as the District Engineer has coordinated with all appropriate agencies and Native American tribes, and complied with the provisions of 33 CFR 325 (Appendix C), the National Historic Preservation Act, Native American Graves Protection and Repatriation Act, and other pertinent regulations could result in violation of state and federal laws. Violators may be subject to civil and criminal penalties.

4. In-water Work: In order to minimize potential impacts to water quality, aquatic species and habitat, in-water work will be limited by the following timing considerations:

b. If work cannot be completed within the preferred timing window, despite every attempt to do so, permittee shall submit a written request to work outside of the preferred window to the District Engineer. The request can be made by means of the joint-agency In-water Work Period Variance Request for Previously Permitted Authorizations form which can be found at http://www.oregon.gov/dsl/PERMITS/Pages/forms.aspx. Permittee shall not begin any in-water work outside of the preferred window until they have received written approval from the District Engineer.

Note: The final specified in-water work period will be based on a project-specific evaluation and may supersede these guidelines through special conditions of the permit verification.

5. Essential Fish Habitat: An activity which may adversely affect essential fish habitat, as identified under the Magnuson-Stevens Fishery Conservation and Management Act (MSA), may not be authorized by NWP until essential fish habitat requirements have been met by the applicant and the Corps. Non-federal permittees shall notify the District Engineer if essential fish habitat may be affected by, or is in the vicinity of, a proposed activity and shall not begin work until notified by the District Engineer that the requirements of the essential fish habitat provisions of the MSA have been satisfied and the activity is authorized. The notification must identify the type(s) of essential fish habitat (e.g., Pacific salmon, groundfish, and/or coastal-pelagic species) managed by a Fishery Management Plan that may be affected. Information about essential fish habitat is available at NOAA’s website: www.nwr.noaa.gov.

6. Bank Stabilization: Permittee shall include the use of bioengineering techniques and natural materials in the project design to the maximum extent practicable and shall minimize the use of rock. Bioengineering bank stabilization techniques are those that increase the
strength and structure of soils with a combination of biological and mechanical elements (e.g., vegetation, root wads and woody debris, rock structures). Riparian plantings shall be included in all project designs unless the permittee can demonstrate that such plantings are not practicable.

7. **Fish Screening:** The permittee shall ensure that all intake pipes include fish screening that complies with standards developed by NMFS and ODFW ("Anadromous Salmonid Passage Facility Design", July 2011 or the most current version), which is available at [http://www.westcoast.fisheries.noaa.gov/fish_passage/solutions/index.html](http://www.westcoast.fisheries.noaa.gov/fish_passage/solutions/index.html).

8. **Work Area Isolation and Dewatering:** Appropriate best management practices shall be implemented to prevent erosion and sediments from entering wetlands or waterways.

   a. All in-water work shall be isolated from the active channel or conducted during low seasonal stream flows to the maximum extent practicable.

   b. Cofferdams shall be constructed of non-erosive material, such as concrete jersey barriers, sand and gravel bag dams, or water bladders. Constructing a cofferdam by pushing material from the streambed or sloughing material from the streambanks is not authorized.

   c. Sand and gravel bag dams shall be lined with a plastic liner or geotextile fabric to reduce permeability and prevent sediments and/or construction materials from entering waters of the U.S.

   d. Upstream and downstream flows shall be maintained by routing flows around the construction site.

   e. A sediment basin shall be used for dewatering to settle sediments in return water prior to release back into the waterbody. Settled water shall be returned to the waterbody in such a manner as to avoid erosion. Sediment basins shall be placed in uplands.

   f. Fish and other aquatic species must be salvaged prior to dewatering.

**Note:** The State of Oregon requires a Scientific Take Permit be obtained to salvage fish and wildlife. Permittee is advised to contact the nearest ODFW office for further information at [http://www.dfw.state.or.us/fish/license_permits_apps/scientific_taking_permit.asp](http://www.dfw.state.or.us/fish/license_permits_apps/scientific_taking_permit.asp).

9. **Dredging:** For NWP-authorized activities that involve removal of sediment from waters of the U.S., the permittee shall ensure that any necessary sediment characterization regarding size, composition, and potential contaminants is conducted prior to dredging. Sediment characterization must be conducted per the Sediment Evaluation Framework for the Pacific Northwest (available at: [http://www.nwp.usace.army.mil/Missions/Environment/DMM.aspx](http://www.nwp.usace.army.mil/Missions/Environment/DMM.aspx)).

**Note:** The discharge associated with the return of sediment-laden water into a water of the U.S. from an upland disposal site requires separate authorization from the District Engineer under NWP 16.
10. **Mechanized Equipment:** In addition to the requirements in NWP General Condition 11, permittee shall implement the following practices to prevent or minimize impacts to the aquatic environment from mechanized equipment:

   a. Use existing roads, paths, and drilling pads where available. Temporary mats or pads, when required to provide access onto wetlands or tidal flats, shall be removed within 30 days of completing the authorized work.

   b. Operate equipment from the top of a streambank and conduct work outside of the active stream channel, unless specifically authorized by the District Engineer.

   c. Equipment shall not be staged, fueled or maintained within waters of the U.S.

   d. Spill prevention and containment materials shall be maintained and be readily accessible at vehicle staging areas. The amount of spill response materials (such as straw matting/bales, geotextiles, booms, diapers, and other absorbent materials, shovels, brooms, and containment bags) maintained on-site must be appropriate for the size of the authorized activity.

11. **Stormwater Management:** Pre-construction notification to the District Engineer is required for all activities resulting in the creation of new impervious surfaces if any species or designated critical habitat listed under the Endangered Species Act (ESA) might be affected or are in the vicinity of the activity. The Corps may require a post-construction stormwater management plan (SWMP) and completion of a supplemental Stormwater Information Form to assist in the determination of the activity’s affects to listed species or designated critical habitat and to be used in ESA consultation as necessary.

   Note: The Oregon Department of Environmental Quality (DEQ) provides information on preparing a SWMP at [http://www.deq.state.or.us/wq/sec401cert/docs/stormwaterGuidelines.pdf](http://www.deq.state.or.us/wq/sec401cert/docs/stormwaterGuidelines.pdf). DEQ’s SWMP requirements may differ from what is required by the Portland District regional conditions. Permittees are advised to refer to the 2017 NWP 401 Water Quality Certification for further information.

12. **Erosion Control:** During construction and until the site is stabilized, the permittee shall ensure all practicable measures are implemented and maintained to prevent erosion and runoff. Temporary stockpiles of excavated or dredged material shall be stabilized to prevent erosion. Once soils or slopes have been stabilized, permittee shall completely remove and properly dispose of or re-use all non-biodegradable components of installed control measures.

   Note: DEQ provides information on erosion and sediment control measures at [http://www.deq.state.or.us/wq/wqpermit/docs/general/npdes1200c/ErosionSedimentControl.pdf](http://www.deq.state.or.us/wq/wqpermit/docs/general/npdes1200c/ErosionSedimentControl.pdf). Details on best management practices are found at [http://www.deq.state.or.us/wq/wqpermit/docs/general/npdes1200c/BMPManual.pdf](http://www.deq.state.or.us/wq/wqpermit/docs/general/npdes1200c/BMPManual.pdf).
13. **Temporary Impacts:** The Corps will determine compensatory mitigation requirements for temporary impacts on a case-by-case basis depending on the duration and nature of the temporary impact and the type of aquatic resource affected.

14. **Contractor Notification of Permit Requirements.** The permittee must provide a copy of the nationwide permit verification letter, conditions, and permit drawings to all contractors and any other parties performing the authorized work, prior to the commencement of any work in waters of the U.S.

15. **Inspection of the Project Site:** The permittee shall allow representatives of the District Engineer to inspect the authorized activity to confirm compliance with nationwide permit terms and conditions. A request for access to the site will normally be made sufficiently in advance to allow a property owner or representative to be on site with the agency representative making the inspection.

**NATIONWIDE SPECIFIC CONDITIONS:**

**NWP 5 – Scientific Measurement Devices**
1. Permittee shall remove all scientific measurement devices including all associated structures and fills including anchoring devices, buoys, and cable within 30 days after the device is no longer being used for its intended purpose.

**NWP 6 – Survey Activities**
1. The use of in-water explosives is not authorized by this NWP.

2. Permittee shall isolate all in-stream exploratory trenching from flowing water.

**NWP 12 – Utility Line Activities**
1. Manholes placed in streams or other waterways require specific approval by the District Engineer.

Note: Agency coordination by the Corps of Engineers is required where utility lines are proposed in estuaries to ensure there are no impacts to native shellfish beds.

**NWP 23 – Approved Categorical Exclusions**
1. Pre-construction notification is required for all activities.

**NWP 29 – Residential Developments**
1. The loss of waters of the U.S. associated with the construction or expansion of a single residence including attendant features (e.g., utility lines, roads, yards, etc) shall not exceed one-fourth (¼) acre.

**NWP 33 – Temporary Construction, Access, and Dewatering**
1. Pre-construction notification to the District Engineer is required prior to commencing all activities conducted in waters of the U.S. (i.e. Section 10 and 404 waters). The pre-construction notification must include a restoration plan showing how all temporary fills and structures will be removed and the area restored to pre-project conditions.
NWP 43 – Stormwater Management Facilities
1. This NWP does not authorize the retention of water in excess of that required to meet stormwater management requirements. Unauthorized purposes include recreational lakes, reflecting pools, irrigation, etc.

NWP 44 – Mining Activities
1. In-stream mining, including bar scalping, is not authorized by this NWP.

2. The use of in-water explosives is not authorized by this NWP.

NWP 48 – Commercial Shellfish Aquaculture Activities
Note: For projects involving commercial aquaculture or mariculture cultivation of oysters, clams, and mussels on state-owned submerged and submersible lands, permittee is advised authorization may be required from the Oregon Department of Agriculture. For more information go to http://www.oregon.gov/ODA/FSD/program_shellfish.shtml

NWP 52 – Water Based Renewable Energy Generation Pilot Projects
Note: Activities located within ocean waters may be subject to the siting requirements of the Oregon Territorial Sea Plan, which designates areas as suitable for such activities. For more information go to http://www.oregon.gov/LCD/OCMP/Pages/Ocean_TSP.aspx.
