YAQUINA BAY SEDIMENT EVALUATION
1986

1. Sediments were taken in July 1986 at various locations from the mouth of the Yaquina River to the turning basin at river mile 2.4. Eleven sediment samples were collected. Sample #11 was collected from the boat harbor, the rest from shoals that were to be dredged. Physical and chemical analyses were performed on all samples except #11 (no chemical analysis). The above was surmised from a review of the Yaquina file. No formal sediment evaluation report was written-up to my knowledge.
