- **Complete Table 1 - Required**

NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Section 10 navigable waters list, DO NOT USE THIS FORM TO MAKE THE DETERMINATION. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Section 10 RHA navigability determination.

Stream 1	Intermittent	Clackamas River (0.4 mile upstream of confluence with Willamette River)	No	This feature exhibits bed and bank, and an ordinary high water mark (mapped using the change in vegetation). Stream 1 flows into Dolan Creek, then to North Fork Deep Creek, to Deep Creek, to the Clackamas River. A map showing the National Hydrography Dataset (NHD) and flow paths is included in Supporting Documentation folder.
Ditch 2	Intermittent	Clackamas River (0.4 mile upstream of confluence with Willamette River)	Yes	This feature exhibits bed and bank (shown in Photograph 19), and an ordinary high water mark (mapped using the change in vegetation). Ditch 2 is represented by topography alone until reaching an unnamed tributary to Tickle Creek, then flows to Tickle Creek, to Deep Creek, to the Clackamas River. A 1940 USGS topography map shows that this feature is a historical tributary.

Table 10. Non-Waters/Excluded Waters and Features

Paragraph (b) Excluded Feature/Water Name	Rationale for Paragraph (b) Excluded Feature/Water and Additional Discussion.
Pond A	(4)(ii) - Pond A is an artificially constructed pond created as a farm irrigation pond. This pond does not have an output, therefore there is no hydrologic connection to downslope jurisdictional features. Therefore, this feature is not a waters of the United States.
Ditch 1	(3)(iii) - Ditch 1 was excavated to bring water from Stream 1 into Pond A. Because hydrology does not flow out of Pond A, flow within Ditch 1 does not flow into a (a)(1) through (a)(3) water. In addition, this ditch does not change the character of Stream 1. Therefore, this feature is not a waters of the United States.
