- **Complete Table 1 - Required**

NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Section 10 navigable waters list, DO NOT USE THIS FORM TO MAKE THE DETERMINATION. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Section 10 RHA navigability determination.

(a)(6) Waters Name	(a)(1)-(a)(5) Water Name to which this Water is Adjacent	Rationale for (a)(6) Designation and Additional Discussion. Identify the type of water and how the limits of jurisdiction were established (e.g., wetland, 87 Manual/Regional Supplement); explain how the 100-year floodplain and/or the distance threshold was determined; whether this water extends beyond a threshold; explain if the water is part of a mosaic, etc.
Wetland A	Vancouver Lake Flushing Channel	<p>“Wetland A” is a water that contains wetland features (vegetation, soils, and hydrology) as defined in the 1987 Manual/WMVC Regional Supplement. “Wetland A” is located within 100ft of the vertical plane of the Vancouver Lake Flushing Channel ordinary high water mark. The Flushing Channel which functions as a tributary ((a)(5) water) of the Columbia River ((a)(1) water). “Wetland A” is located on a berm that was constructed in association with the construction of the Flushing Channel. This berm was constructed in 1983 and has not been utilized as an active construction site within the past five years; therefore, it has been determined that “Wetland A” has formed on a abandoned construction site and it does not meet the conditions of a excluded water (b)(4)(v) “Water-filled depressions created in dry land incidental to mining or construction activity”.</p>
