- **Complete Table 1 - Required**

NOTE: If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Section 10 navigable waters list, DO NOT USE THIS FORM TO MAKE THE DETERMINATION. D. ADDITIONAL COMMENTS TO SUPPORT AJD: The requestor did not provide a wetland delineation. The U.S. Department of Agriculture Natural Resources Conservation Service lists Bullards sandy loam 7-12% slopes as a hydric soil in Coos County, Oregon.

Upon review of aerial imagery, a site visit, and supporting information provided the Coquille Indian Tribe, the study area in question appears have been upland at the time the cranberry bogs (north) and (south) were created (1996).

The cranberry bogs in question are artificially irrigated areas which are flooded seasonally for the production of cranberries. Water is applied from a ponded area located directly north of the study area. The ponded area located directly north of the study area is not included in the study area for purposes of this jurisdictional determination. The bogs are located on a terrace outside of the 100-year floodplain for Fourth Creek and Coos Bay. The Corps assessment is that the roadways within the study area are upland. The cranberry bogs located within the study area are artificially irrigated areas that would revert to dry land should the application of water to them cease (33 CFR 323.8(b)(4)(i)). In addition, they are artificially constructed meeting the definition of 33 CFR 323.8(b)(4)(ii).
