**B. Typical year assessment(s):** The antecedent precipitation tool was utilized for the timing of the wetland delineation performed by the consultant on 27 August 2020 to determine if the site was reviewed during drier or wetter than normal circumstances. The APT determined the review was performed during wetter than normal conditions for the time of the year. Therefore, the Corps can conclude site conditions during the delineation of the site were wetter than normal for August 2020.

**C. Additional comments to support AJD:** N/A or provide additional discussion as appropriate.
