

Monitoring Action Number	Indicator	Monitoring Task	Justification	Uncertainty And Risk	Duration	Data Analysis	Trigger For Management Changes
MA-2	Dredging volume, bedload.	Annual dredging volumes, construction and O&M of 43' channel.	To ensure scale of the project does not change.	Bedload M, L	Life of the project.	Actual volumes will be compared to predicted.	Dredging volumes exceed capacity of the disposal plan.

Description: The annual dredging volumes for each dredging bar (approximately 3 miles reaches) will be tabulated, as completed, throughout the dredging season. The dredging volumes will be compared to the forecast and to past dredging to investigate trends. Tabular data can be provided upon request.

Schedule: Dredging volumes will be compiled for comparison to the forecast and will be reported to NOAA Fisheries and USFWS in the annual report in the following January once construction is initiated.

Status: The comparison has started and will be tabulated throughout the dredging season.
